

CASE STUDY CAVALIER KING CHARLES SPANIEL

Clinician: Dr. Mayfield

Location: Baxter Springs, KS

Species/Breed: Canus,
Cavalier King Charles Spaniel

Age: 6

Gender: Male

Problem: Large abscess

Location on patient: Neck

Product(s) used: Vetericyn Plus[®] VF Wound and Skin Care Liquid, Vetericyn Plus[®] VF Antimicrobial Hydrogel

Comments & Notes on Treatment: Wrangler, a 6-year-old intact male Cavalier King Charles Spaniel, presented with a large swelling on the left side of his face/neck area.

Following sedation and clipping of the area, necrotic tissue was noted and bloody mucopurulent exudate was aspirated.

The abscess was opened and flushed with Vetericyn VF liquid. Wrangler's owner was instructed to flush the wound daily with Vetericyn VF liquid and then fill it with Vetericyn VF hydrogel.

As this was a localized infection, no other treatment was given.
